

Multiple map layers add-on

With this add-on it is possible to display one or two additional map layers on top of the “main” interactive map layer in StatPlanet Plus.

In the “web\map” folder are three sub-folders containing different versions of the 'SHPreader.swf' file, depending on whether you require just one, two or three map layers. Depending on how many map layers are required, you would need to copy the 'SHPreader.swf' file from the corresponding directory to the 'web' directory (replacing the existing 'SHPreader.swf' file).

The map layers in the folder “map” would need to be named map.dbf/map.shp (main map layer), map2.dbf/map2.shp (map layer 2), and map3.dbf/map3.shp (map layer 3).

The colours for map layers 2 and 3 can be set in the StatPlanet Data Editor, sheet “settings”, variables “MAP-BRDR2” (map layer 2) and “MAP-BRDR3” (map layer 3).
